Report on Lead Crystal Battery Capacity Test

Make and type of batteries: Lead Crystal 2V 300Ah (Model CNFJ-300)
Tested at: Siemens IIS-Midrand
Tested on: From 2010-08-06 to 2010-08-31

CNFJ-300 Battery - 6 x 2V cells were connected in series. Tests were performed at various loads and different conditions.

Results obtained from Capacity Tests proved, that the Lead Crystal Batteries (Model CNFJ-300) exceeded the performance of batteries used and tested during my 30 years involved with the installation, testing and commissioning of all different types of batteries and power units (rectifiers).

I will fully recommend using Lead Crystal batteries on all types of industrial installations.

B. Cuba,
Siemens I IS,
DC power workshop
Midrand,
